

Silver Liner Sheath

Another innovation from

Comfort Products prosthetic sheaths have earned a reputation for providing maximum comfort and great durability, all at a very affordable price. As the first manufacturer in the U.S to incorporate **Xstatic** silver into prosthetic and orthotic knitted items, we understand the benefits of silver.

The **Silver Liner Sheath** was designed to wear under a liner and does not compromise suspension!

Wearing the **Silver Liner Sheath** under a liner can help to eliminate some of the skin problems common to many liner wearers. The natural anti-microbial action of the silver will eliminate the bacteria which is often the cause of many of these skin problems, including dermatitis and rashes.

Xstatic yarn has a pure layer of silver included in the surface of the textile fiber. The yarn offers all of the benefits known to be inherent to pure silver in a textile fiber. Some of the benefits include:

- Anti-microbial** - eliminates odor causing bacteria and fungus
- Anti-Odor** - neutralizes ammonia and denatured proteins, eliminating odors
- All Natural** - 100% safe and non-toxic, contains no chemicals
- Thermodynamic** - regulates temperature: keeping wearer cooler in summer and warmer in winter.
- Anti-Static** - has very high electrical conductivity
- Therapeutic** - less discomfort due to high conductive performance

The **Silver Liner Sheath** is the latest addition to the Comfort family of **Xstatic** products. It is reinforced for great wear resistance and has a unique mesh design which stretches to conform to shape while allowing for ventilation. The turned welt top provides added strength. The top is shorter than our traditional sheaths which allows the wearer to receive the full benefits of the silver without interfering with the design characteristics of the liner. Please check size chart before ordering!
