

Silver Liner Sheath

Another innovation from Comfort Products

Comfort Products prosthetic sheaths have earned a reputation for providing maximum comfort and great durability, all at a very affordable price. As the first manufacturer in the United States to incorporate X-static silver into prosthetic and orthotic knitted products, we understand the benefits that silver can offer.

X-static yarn has a pure layer of silver included in the surface of the textile fiber. The yarn offers all of the benefits known to be inherent to pure silver in a textile fiber. Some of the specific benefits of silver are:

Antimicrobial -
eliminates odor causing bacteria and fungus

Anti-odor -
inhibits growth of bacteria and fungi & neutralizes ammonia & denatured proteins

All natural -
100% safe and non-toxic, containing no chemicals

Thermodynamic -
regulates temperature: cooler in summer, warmer in winter. Heat conductive body heat is distributed and conducted to outside air, and heat reflective body heat is reflected back to the skin

Anti-Static -
has very high electrical conductivity

Therapeutic -
Less discomfort thanks to the high conductive performances

The SilverSheath is the latest addition to the Comfort family of X-static products. It is reinforced for great wear resistance and has a unique mesh design which stretches to conform to shape while allowing necessary ventilation. The turned welt top provides added strength. The SilverSheath also adds the benefits of X-static, as shown above.

The SilverSheath can also be worn under a liner!

Wearing the SilverSheath under a liner can help to eliminate some of the skin problems

common to many liner wearers. The natural anti-microbial action of the silver will eliminate the bacteria which is often the cause of many of these skin problems.
